

FATHIA OYINLOYE

Backend Software Developer · Java · TypeScript · Python · REST APIs · MySQL · MongoDB · Docker · Linux
+2347048254250 fathiaoyinloye22@gmail.com github.com/fathiaoyinloye

PROFESSIONAL SUMMARY

Backend Software Developer with 1 year of production experience designing, developing, and deploying APIs and backend services in Java (Spring Boot) and Python (Django, FastAPI). Strong command of OOP, microservices architecture, REST API design, and SQL/NoSQL databases — including MySQL, PostgreSQL, and MongoDB. Proficient in TypeScript and JavaScript, with working knowledge of modern web frontend architecture. Experienced with Linux environments including SSH, file management, and service operations on remote machines via AWS EC2. Solid understanding of security, JWT authentication, and data protection practices. Uses Git, GitHub Actions CI/CD, Docker, and Agile methodologies in every project. Comfortable working independently in fast-paced, multicultural environments.

CORE COMPETENCIES

Java · Spring Boot · Spring Security · Python · Django · FastAPI · TypeScript · JavaScript · Node.js (learning) · REST APIs · Microservices · OOP · Design Patterns · MySQL · PostgreSQL · MongoDB · SQL · NoSQL · Data Modelling · Database Design · Docker · AWS EC2 · Linux/SSH · GitHub Actions · CI/CD · Git · JWT · RBAC · Security & Data Protection · Apache Kafka · JUnit 5 · Mockito · Agile/Scrum · Technical Documentation

WORK EXPERIENCE

Backend Software Developer · Semicolon Africa

2025 – 2026

Lagos, Nigeria · Full-time · Java · Spring Boot · Spring Security · Python · Django · MySQL · PostgreSQL · JWT · Agile

- Designed, developed, and maintained RESTful APIs and backend services supporting web and mobile applications — building scalable, high-performance systems with reliability, security, and efficiency as core requirements.
- Built and maintained Java/Spring Boot backend services handling user onboarding, digital wallet management, and financial transaction processing — writing clean, maintainable, well-documented code following OOP principles and microservices architecture.
- Designed and managed relational and non-relational databases — MySQL and PostgreSQL schema design, data modelling, query optimisation, migrations, and data integrity enforcement across multiple production applications.
- Implemented JWT-based authentication and Role-Based Access Control via Spring Security — enforcing solid security and data protection practices across all API endpoints.
- Operated Linux-based environments via SSH on AWS EC2 instances — managing remote server setup, file operations, service configuration, environment variables, and deployment of containerised applications using Docker.
- Collaborated with frontend developers, product managers, and stakeholders in Agile/Scrum ceremonies to implement new features and improve existing systems — delivering solutions on time across 2-week sprint cycles.
- Troubleshooted and debugged complex issues in production environments, performing root cause analysis and providing effective solutions with clear documentation.

Open Source Backend Developer · GitHub Community Projects

2026 – Present

Remote · Volunteer · Java · Spring Boot · Django · TypeScript · GitHub Actions · Docker · AWS EC2 · Linux

- Designed and delivered backend API features for open source Java/Spring Boot and Django projects, iterating through full maintainer code-review cycles and maintaining clean, well-documented codebases.
- Built a fully automated CI/CD pipeline (GitHub Actions) that builds, tests, packages Docker images, and SSH-deploys to a live AWS EC2 Linux instance on every merge — demonstrating hands-on Linux remote operations in a real production context.
- Wrote JUnit 5 and Mockito unit test suites, kept up to date with emerging backend technologies and best practices, and maintained technical documentation across all contributions.

KEY PROJECTS

OmotemmyPay — Digital Wallet Backend

2024 – 2025

Python · Django · Django REST Framework · PostgreSQL · JWT · REST API · Security

- Built a production-grade financial backend: REST APIs for user registration, wallet management, deposits, transfers, and transaction history — with atomic transaction logic, JWT security, and audit-ready PostgreSQL schema design.
- Deployed on Railway with managed PostgreSQL — configuring Linux environment variables, database connection strings, and production build settings.

ShopFlow — Ecommerce Backend

2024 – 2025

Java · Spring Boot · MySQL · REST API · OOP · Data Modelling

- Built a scalable ecommerce backend with product management, order processing, and merchant data — MySQL relational database with optimised schema design, data modelling, and query performance tuning.

SmartBudget — Financial Analytics API

2024 – 2025

Java · Spring Boot · PostgreSQL · Strategy Pattern · OOP · Third-Party API Integration

- Architected a financial analytics backend using OOP and the Strategy Design Pattern — extensible report generation without modifying core business logic, plus third-party API integration with full error handling.

Food Notification System — Kafka Pipeline²⁰²⁴

Java · Spring Boot · Apache Kafka · Microservices · Event-Driven Architecture

- Designed a Kafka-based event-driven microservices pipeline — brokers, topics, producers, consumers, consumer groups — demonstrating microservices architecture and backend systems integration experience.

URL Shortener — Live Production Service

2024 – 2025

Python · Django · MongoDB · NoSQL · Vercel · Live: url-shortener-application-vert.vercel.app

- Built and deployed a live URL management service using MongoDB as the NoSQL data store — demonstrating NoSQL database design and end-to-end production deployment on a Linux-based cloud environment.

TECHNICAL SKILLS

Primary Languages: Java (Spring Boot, Spring Security), Python (Django, FastAPI), TypeScript, JavaScript, SQL

Backend Frameworks: Spring Boot, Spring Data JPA, Spring Security, Django, Django REST Framework, FastAPI

Databases (SQL): MySQL (schema design, data modelling, query optimisation, migrations), PostgreSQL

Databases (NoSQL): MongoDB (document design, CRUD, queries)

API & Architecture: REST API Design, Microservices Architecture, OOP, Design Patterns, Apache Kafka

Security: JWT, Spring Security, RBAC, Secure Coding, Data Protection

Linux & DevOps: Linux/SSH (remote server ops, file management, service control), Docker, AWS EC2, GitHub Actions, Git

Testing: JUnit 5, Mockito, Unit Testing, Integration Testing, API Testing (Postman)

Frontend Awareness: React, TypeScript, JavaScript — understanding of how web frontend integrates with backend APIs

Methods: Agile/Scrum, Code Review, Technical Documentation, Independent & Team Delivery

Learning: Node.js, Express.js, NestJS, Azure, Jest

EDUCATION

Software Engineering Programme — Semicolon Africa, Lagos

2025 – 2026

Intensive programme: backend development, OOP, system design, databases, Linux/DevOps, CI/CD, security, and Agile delivery.

Ordinary National Diploma (OND), Accounting — Lagos State Polytechnic, Lagos

2021 – 2023
