

Subject: Application API Tester / Documentation Specialist | Fathia Oyinloye

Dear Hiring Team,

I am writing to apply for the API Tester / Documentation Specialist position.

API testing is where my QA experience is strongest. I have systematically tested REST APIs across multiple production financial platforms verifying request/response contracts, HTTP status codes, authentication and authorisation enforcement, error handling, and edge case behaviour using Postman. I don't just test the happy path; I construct adversarial scenarios designed to find what breaks under real conditions, and I document every finding with the clarity and detail that developers need to act without follow-up.

On the documentation side, I have maintained API guides, README documentation, inline code comments, and test coverage reports throughout my engineering work. I understand how APIs are built and not just how they are consumed which means my documentation reflects how systems actually behave, not just how they are supposed to behave.

I write clear, structured, actionable documentation as a default, not an afterthought. That combination of rigorous API testing and precise written communication is exactly what this role needs, and it is exactly what I bring.

My CV is attached. I am available immediately and look forward to contributing to your team.

Best regards,
Fathia Oyinloye
