

FATHIA OYINLOYE

QA Analyst · Test Case Design · Defect Logging · API Testing · Regression Testing · CI/CD · Agile

+2347048254250fathiaoyinloye22@gmail.comgithub.com/fathiaoyinloyeLinkedIn · Lagos, Nigeria

PROFESSIONAL SUMMARY

Detail-oriented QA Analyst with 1 year of hands-on experience in structured test case design, defect logging, API testing, regression testing, and SQL/database validation. My background as a backend engineer means I understand how systems are built — which makes me better at identifying what could break, not just what is obviously broken. I have written test plans, created and executed test cases across functional, regression, edge-case, and exploratory scenarios, logged and tracked defects through their full lifecycle, and built CI-based automated test pipelines using GitHub Actions. I care about who uses the software I test. The idea that my test coverage directly protects field officers and smallholder farmers from software failures is not just meaningful to me — it is the kind of accountability I hold myself to by default. I am motivated by mission-driven work, comfortable in fast-paced Agile environments, and actively developing automation skills including Selenium and Cypress.

CORE COMPETENCIES

Test Case Design · Test Case Execution · Defect Logging · Bug Tracking · Defect Lifecycle · Functional Testing · Regression Testing · Edge Case Testing · Exploratory Testing · Boundary Testing · Negative Testing · Integration Testing · API Testing · Postman · SQL Testing · Database Validation · PostgreSQL · MySQL · MongoDB · Release Readiness Assessment · Root Cause Analysis · CI/CD Test Pipelines · GitHub Actions · GitHub Issues · JUnit 5 · Mockito · Test Documentation · Test Planning · Agile/Scrum · Sprint Reviews · Requirement Analysis · Selenium (learning) · Cypress (learning) · Appium (learning) · JIRA (conceptual) · TestRail (conceptual)

WORK EXPERIENCE

QA Analyst & Backend Engineer · Semicolon Africa

2025 – 2026

Lagos, Nigeria · Full-time · Test Case Design · Defect Logging · API Testing · SQL Validation · Agile/Scrum

- Designed and executed structured test cases for mobile-facing and web application features — covering functional, regression, edge-case, and exploratory testing scenarios across user onboarding, wallet management, and financial transaction flows.
- Identified, logged, and tracked defects end-to-end using GitHub Issues — writing clear bug reports with detailed reproduction steps, severity ratings, evidence screenshots, and expected vs actual behaviour that engineers could act on without follow-up.
- Conducted systematic API testing with Postman across all REST endpoints — verifying request/response contracts, HTTP status codes, authentication and authorisation enforcement, error handling, and boundary condition behaviour before every feature release.
- Performed SQL and database validation by cross-referencing API responses against PostgreSQL and MySQL database state after every test scenario — confirming end-to-end data integrity and catching silent backend discrepancies before deployment.
- Conducted release readiness assessments before every deployment — providing a structured summary of tested core user flows, outstanding defects, severity ratings, and risk areas to guide release decisions.
- Investigated root causes of recurring bugs and test failures — distinguishing between isolated incidents and systemic issues, documenting findings clearly, and validating fixes through regression testing before closure.
- Participated in Agile sprint cycles — reviewing requirements and user stories before development began, flagging ambiguities and edge cases that could become quality risks downstream, and contributing to team retrospectives.

QA Contributor & Open Source Engineer · GitHub Community Projects

2026 – Present

Remote · Volunteer · JUnit 5 · Mockito · GitHub Actions · Docker · AWS EC2 · Postman · CI/CD

- Built and maintained a CI-based automated test automation pipeline (GitHub Actions) with at least one automation script running reliably in CI — triggering on every commit, running the full test suite in a clean Docker environment, and blocking merges on failures.
- Created and maintained JUnit 5 and Mockito automated test suites for contributed features — raising test coverage on regression scenarios and catching defects before they reached the main branch.
- Performed API testing and regression validation on contributed REST endpoints using Postman — verifying contracts, authentication, error handling, and edge case behaviour, logging all defects with full reproduction evidence.
- Maintained test documentation, README testing guides, and inline comments — contributing to team knowledge and ensuring test approaches were clearly documented for future contributors.

QUALITY ASSURANCE PROJECTS

OmotemmyPay — Full Test Coverage & Defect Management

2024 – 2025

Python · Django · PostgreSQL · Postman · Functional · Regression · Edge Case · SQL Validation · Defect Tracking

- Designed and executed a full test suite covering core user flows across all wallet API endpoints — deposits, transfers, withdrawals, balance enquiries, and transaction history — ensuring zero critical flows went untested before release.

- Constructed adversarial edge-case scenarios targeting failure conditions: concurrent double-spend attempts, zero-balance transfers, expired token access, and malformed payloads — logging each defect with severity ratings and full reproduction steps.
- Performed SQL database validation after every test scenario — cross-referencing PostgreSQL records against API responses to confirm end-to-end data integrity and detect discrepancies between application and persistence layers.
- Produced release readiness assessments before each deployment cycle — documenting tested flows, confirmed defects, risk areas, and outstanding items for the engineering team's go/no-go decision.

SmartBudget — Integration & Regression Test Suite

2024 – 2025

Java · Spring Boot · PostgreSQL · Third-Party API · Integration Testing · Regression Testing

- Tested third-party API integration under failure conditions — timeouts, malformed responses, partial data, service unavailability — confirming graceful error handling and data consistency, with all defects tracked to resolution.
- Maintained regression test cases for all report generation modules, verifying output accuracy against manually computed expected values across varied datasets and flagging deviations with clear reproduction steps.

CI/CD Automated Quality Gate Pipeline

2026

GitHub Actions · JUnit 5 · Docker · AWS EC2 · Automated Test Automation · CI-Based Testing

- Designed and implemented a CI-based automated testing pipeline: triggers on every commit, runs the complete test suite in a clean Docker environment, blocks merges on failures, and publishes versioned builds — demonstrating direct automation capability in CI.

ShopFlow & URL Shortener — Web & Database Testing

2024 – 2025

Java · Spring Boot · MySQL · Python · Django · MongoDB · Web Application Testing · SQL & NoSQL

- Tested web-based application interfaces across ecommerce (MySQL) and URL management (MongoDB) platforms — validating product management flows, order processing, and link management across both SQL and NoSQL data layers.

TECHNICAL SKILLS

Test Design & Execution: Functional, regression, exploratory, edge case, boundary, negative, integration, UAT, release readiness

API Testing: Postman, REST API validation, contract testing, auth & RBAC testing, HTTP status verification

Database Testing: PostgreSQL, MySQL, MongoDB — data integrity validation, SQL query testing, schema verification

Defect Management: GitHub Issues, defect lifecycle, bug report writing, severity classification, root cause analysis, fix verification

Test Documentation: Test plans, test cases, execution reports, defect reports, release readiness assessments, test coverage docs

Automation & CI/CD: JUnit 5, Mockito, GitHub Actions CI pipelines — Selenium, Cypress, Appium (actively learning)

Bug Tracking Tools: GitHub Issues — JIRA, TestRail (conceptual, actively familiarising)

Languages: Java, Python, JavaScript, TypeScript, SQL

Frameworks: Spring Boot, Spring Security, Django, Django REST Framework, FastAPI

Methods: Agile/Scrum, sprint reviews, requirement analysis, cross-functional collaboration, technical documentation

Developing: Selenium, Cypress, Playwright, Appium, JIRA, TestRail, Performance Testing, BDD

EDUCATION

Software Engineering Programme — Semicolon Africa, Lagos 2025 – 2026

Intensive programme covering software testing, system design, data structures & algorithms, CI/CD, cloud deployment, and Agile delivery.

Ordinary National Diploma (OND), Accounting — Lagos State Polytechnic, Lagos 2021 – 2023

Foundation in analytical thinking, financial precision, and systems logic — directly applicable to quality assurance in mission-driven, data-intensive environments.
