

FATHIA OYINLOYE

QA Engineer · Manual Testing · API Testing · Test Automation · SQL · Agile · STLC · SDLC

+2347048254250fathiaoyinloye22@gmail.comgithub.com/fathiaoyinloyeLinkedIn · Lagos, Nigeria

PROFESSIONAL SUMMARY

Detail-oriented QA Engineer with 1 year of hands-on experience in manual testing, API testing, test case creation and execution, bug tracking, and SQL/database testing. Strong understanding of Software Development Life Cycle (SDLC) and Software Testing Life Cycle (STLC) — applied across real financial platforms handling live transactions. Experienced with Postman for API testing, GitHub Issues for bug tracking and reporting, and CI/CD pipelines (GitHub Actions) for automated quality gates. Backend engineering background means I understand how systems are built and where they are most likely to fail — giving me a structural advantage in identifying defects. Actively developing automation testing skills including Selenium. Thrives in Agile/Scrum environments, communicates clearly, and is available to join immediately.

CORE COMPETENCIES

Manual Testing · Automation Testing · API Testing · Postman · Test Case Creation · Test Case Execution · Bug Tracking · Bug Reporting · Defect Lifecycle Management · SDLC · STLC · SQL Testing · Database Testing · PostgreSQL · MySQL · MongoDB · Regression Testing · Functional Testing · Exploratory Testing · Boundary Testing · Negative Testing · Integration Testing · GitHub Issues · CI/CD · GitHub Actions · JUnit 5 · Mockito · Agile Methodology · Scrum · JIRA (conceptual) · Selenium (learning) · Java · Python · SQL

WORK EXPERIENCE

QA Engineer & Backend Developer · Semicolon Africa

2025 – 2026

Lagos, Nigeria · Full-time · Manual Testing · API Testing · SQL Testing · JUnit 5 · Agile/Scrum · SDLC · STLC

- Created and executed comprehensive test cases covering functional, regression, boundary, and negative test scenarios across all application features — following STLC processes from requirement analysis through test closure.
- Performed systematic API testing using Postman — verifying REST endpoint contracts, HTTP status codes, request/response schemas, authentication enforcement, error handling, and edge case behaviour before every release.
- Conducted SQL and database testing by cross-referencing API responses against PostgreSQL and MySQL database state after every test scenario — confirming end-to-end data integrity and catching silent backend discrepancies.
- Tracked, documented, and managed defects end-to-end using GitHub Issues — writing detailed bug reports with reproduction steps, expected vs actual behaviour, environment details, and severity ratings, then verifying fixes before closure.
- Designed adversarial test scenarios to validate atomic transaction logic: concurrent double-spend attempts, zero-balance edge cases, duplicate submissions — confirming data consistency under all tested conditions.
- Participated in Agile/Scrum ceremonies — sprint planning, daily standups, requirement reviews, and retrospectives — flagging ambiguities and edge cases before development began to reduce late-cycle defect discovery.

QA Contributor & Open Source Developer · GitHub Community Projects

2026 – Present

Remote · Volunteer · Java · Spring Boot · Django · JUnit 5 · Mockito · GitHub Actions · Postman

- Wrote and maintained automated test suites (JUnit 5, Mockito) for open source Java/Spring Boot and Django projects — improving test coverage and catching regressions before they reached the main branch.
- Built a CI/CD automated testing pipeline (GitHub Actions) that runs the full test suite on every commit and blocks merges on test failures — implementing continuous quality gate enforcement.
- Performed API testing and regression validation on contributed REST endpoints — verifying contracts, authentication, error handling, and edge case behaviour using Postman before every pull request.
- Documented test findings, wrote clear bug reports in GitHub Issues, and maintained README testing guides — improving defect visibility and contributor onboarding.

QUALITY ASSURANCE PROJECTS

OmotemmyPay — Manual & API Testing

2024 – 2025

Python · Django · PostgreSQL · Postman · Manual Testing · SQL Testing · Bug Tracking

- Designed and executed structured test cases covering all wallet API endpoints — deposits, transfers, withdrawals, and transaction history — across functional, boundary, negative, and concurrency scenarios using Postman.
- Performed SQL database testing by validating PostgreSQL data state after every transaction scenario — cross-referencing API responses against database records to confirm end-to-end integrity.
- Tested authentication and authorisation enforcement — confirming unauthenticated requests, expired tokens, and wrong-role access were correctly rejected with accurate HTTP error responses.
- Tracked all defects in GitHub Issues with full reproduction steps, severity classification, and fix verification — managing the complete bug lifecycle from discovery to closure.

ShopFlow — Ecommerce SQL & API Testing

2024 – 2025

Java · Spring Boot · MySQL · Postman · SQL Testing · Regression Testing

- Conducted SQL testing on MySQL database schemas — validating product data, order records, and merchant information integrity across CRUD operations and schema migrations.
- Executed regression test cases after every feature update, verifying that new changes did not break existing functionality across the ecommerce platform.

SmartBudget — Integration & Regression Testing2024 – 2025

Java · Spring Boot · PostgreSQL · Third-Party API · Integration Testing

- Tested third-party API integration failure scenarios — timeouts, malformed responses, partial data — confirming graceful error handling and consistent system state under all failure conditions.
- Maintained regression test cases for all report generation modules, verifying output accuracy against expected results across varied data inputs.

TECHNICAL SKILLS

Manual Testing: Functional testing, regression testing, exploratory testing, boundary testing, negative testing, UAT

API Testing: Postman, REST API validation, request/response verification, auth testing, HTTP status codes

Automation Testing: JUnit 5, Mockito, GitHub Actions CI pipelines — Selenium (actively learning)

SQL & Database Testing: PostgreSQL, MySQL, MongoDB — schema validation, data integrity testing, query verification

Bug Tracking & Reporting: GitHub Issues, defect lifecycle, bug report writing, severity classification, fix verification

SDLC & STLC: Requirement analysis, test planning, test case design, test execution, defect reporting, test closure

Test Documentation: Test plans, test cases, test execution reports, defect reports, test summary reports

CI/CD: GitHub Actions, Docker, Git, automated quality gate pipelines

Languages: Java (primary), Python, JavaScript, TypeScript, SQL

Frameworks: Spring Boot, Spring Security, Django, Django REST Framework, FastAPI

Methods: Agile/Scrum, Sprint Planning, Code Review, Cross-Functional Collaboration

Developing: Selenium, Cypress, Playwright, JIRA, Performance Testing

EDUCATION

Software Engineering Programme — Semicolon Africa, Lagos

2025 – 2026

Intensive programme covering software engineering, testing methodologies, SDLC, data structures & algorithms, CI/CD, and Agile delivery.

Ordinary National Diploma (OND), Accounting — Lagos State Polytechnic, Lagos2021 – 2023

Strong foundation in analytical thinking, precision, and attention to detail — core qualities that directly support quality assurance and defect detection.
